

WIN A FREE LIVING GREEN WALL FOR YOUR SCHOOL!

What is a Green Wall?

A green wall, also known as a living wall, bio-wall, eco-wall, or vertical garden - is a scientific system of plants grown on a wall. Green walls create a work of art for both indoor and outdoor spaces, and allow individuals to live healthier. The plants on the green wall take in the air we exhale and clean it to produce fresh oxygen.

Why do I want to win a green wall for my school?

Not only visually pleasing, a green wall will clean the air in your school 24/7 and provide an educational environment of clean and healthy air to breathe, increasing focus in class. This green wall system will clean almost enough air to fill an olympic sized swimming pool per day; enough air required for approximately 200 people to breathe daily.

STEM Education Program

This green wall system is the perfect opportunity for teachers to incorporate science, technology, engineering, and mathematics through a hands-on experience. The green wall system gives students the chance to study the process of phytoremediation - the use of living green plants to clean the air and soil.

How do I enter?

Visit the contest page to enter: winafreegreenwall.hscampaigns.com
Follow the instructions on the page and click submit for the chance to win. Valid in the State of Maryland only.

**GRAND
PRIZE**
